Aleksandr Romaniuk

Full Cycle Engineer

Backend (Java), Frontend (React), DevOps, team leadership, FinTech, risk management

Buenos Aires, Argentina (GMT−3). Open to remote work

alexromantrue@gmail.com @petrovwich github.com/petrovvich Articles on Habr t.me/javaminds

Full cycle engineer with 10+ years in fintech: from requirements and architecture to Java code, infrastructure, production support and team leadership. My flagship work is a risk management system that serves the business in 5 countries.

I build microservices on Java, Kotlin and Spring, design decision flows, and take them all the way to production: Kubernetes, CI/CD, monitoring, incidents. I have led small and mid-sized teams, hired a lot of in-house engineers, and give talks online and in person in Buenos Aires. I write on Habr and in my own Telegram channel. Fluent with AI: I use it every day and roll it out across the company.

Experience

Jun 2025 – present | 1 yr 5 mos

Digital Finance International

Senior / Lead Java Developer

International online lending group

Stack: Java 25, Kotlin, Spring Boot 4, Hibernate/JPA, PostgreSQL, MySQL, RabbitMQ, Hazelcast, Infinispan, BPMN, React, TypeScript, Kubernetes (RKE2, Rancher), Helm, GitLab CI, Jib, Keycloak, Prometheus, Grafana, Vector, Parseable, Trivy, Backstage, MCP, AI agents, RAG

Risk management platform: up to 10,000 requests a day, depending on the country.

- Moved away from Camunda to an in-house solution. Business processes now run on it.
- Moved the platform to Java 25 and Spring Boot 4.
- Replaced Redis with a fault-tolerant Infinispan cluster.
- Moved all scoring services to Kubernetes clusters and switched deployment to GitOps with Helm.
- Improved observability: alerts in Prometheus Alertmanager, Grafana dashboards synced through git, logs in a single store.
- Launched a Backstage developer portal that publishes OpenAPI specifications and release reports, plus a service that collects Trivy vulnerability scan reports.
- Built and rolled out a company-wide MCP server, and introduced RAG over Confluence and GitLab.

Mar 2024 – May 2025 | 1 yr 3 mos

Raiffeisenbank Russia

Java Developer

Bank

Stack: Java, Kotlin, Spring Boot, Hibernate, PostgreSQL, Jasper Reports, Docker, Kubernetes

Internal platform that generates certificates and receipts for customers

Team: 15 backend and 5 frontend developers, 5 analysts, 3 QA, tech lead, DevOps

- Turned business needs into requirements together with analysts.
- Designed the architecture with the team and the tech lead.
- Built microservices and document templates on Jasper Reports.
- Integrated with external systems: data buses and file storage.
- Reviewed code, deployed services, handled incidents and support.

Aug 2021 – Feb 2024 | 2 yrs 7 mos

Software Cats

Lead Java Developer

Custom software development

Stack: Java 8–17, Spring Boot, Spring Cloud Gateway, Eureka, MapStruct, PostgreSQL, Oracle, RabbitMQ, ActiveMQ, Hazelcast, Keycloak, OAuth2/JWT, REST, SOAP, Camunda, Hippo CMS, Docker, Kubernetes (Rancher), GitLab CI, Nexus, React, jQuery

Besides development: requirements gathering, hiring and onboarding Java developers, performance reviews, internal tech talks.

Platform connecting utility providers and property management companies

Team: 20+ people: architects, analysts, QA, developers

- Led a team of 3 developers: analysed customer requirements, split tasks, reviewed code.
- Extended utility billing processing: SOAP intake from external systems, conversion to the internal format, enrichment from the database and other services over RabbitMQ, hand-off to storage over SOAP and RabbitMQ.
- Chose and justified technical solutions and supported them in production.
- **Built a shared logging library: logging defects dropped to zero.**
- **Automated customer notifications that staff used to fill in by hand, saving thousands of person-hours.**

B2B portal for HoReCa orders and logistics

Team: 2 backend and 2 frontend developers, architect, 2 analysts, QA, PM, DevOps

- Built the portal's backend microservices.
- Integrated with Keycloak, an enterprise service bus over ActiveMQ and S3 storage.
- Set up CI/CD, logging and observability.

Digital textbook platform for secondary schools

Team: 2 Java developers, QA, DevOps

- Did the initial analysis, agreed the MVP with the customer and estimated the project.
- Split tasks across the team and tracked delivery; built the base module structure.
- Set up GitLab, Nexus and Keycloak, CI/CD and integrations (mail, FTP).

Shorter projects

- Jira plugin (Java 8 backend, jQuery frontend) prepared for the Atlassian Marketplace.
- Adapters that unify work with Camunda and Artemis for an insurer's digital platform.
- Plugin that reads fiscal data from cash registers and sends it to the backend.
- Backend of a major mobile operator's customer app: new features, refactoring, cross-team integrations.

Sep 2019 – Aug 2021 | 2 yrs

Lantan

Java Developer

Custom software development

Stack: Java 8/11, Kotlin, Spring Boot, Spring Cloud, Camunda, Flowable, RabbitMQ, Kafka, PostgreSQL, Docker, Kubernetes, GitLab CI, Ktor, Kodein, Retrofit, Dagger 2, Flutter, React

Credit risk and scoring platform, 30+ microservices

Team: 2 Java developers, DevOps, QA

- Built microservices and BPMN processes on Camunda and Flowable, including 4 services from scratch for 3 countries.
- Migrated the codebase from Java to Kotlin and between Java 6 and 11.
- Took decision flows from analysis to production: Docker images, Kubernetes deployments, monitoring and alerting, CI pipelines.
- Set up Kubernetes clusters from scratch: nodes, ingresses, upgrades.
- **Brought the full business process to a 30-second SLA from an 80-second average, while cutting service memory use by 40% and container size by 40%.**
- **Moved releases to Kubernetes: up to 5 releases a day.**

Android app for taxi drivers that collects orders from several aggregators

Team: Solo developer

- Maintained the app and added features; extended the integration with its server.
- Created mobile app prototypes.
- **Wrote a backend emulator on Kotlin and Ktor with Firebase push notifications: features shipped twice as fast.**

Jan 2016 – Aug 2019 | 3 yrs 8 mos

smsfinance

Java Developer / Lead Support Engineer

Online microfinance lender

Stack: Java 6–8, Spring 4, Spring Boot, Hibernate, MySQL, PostgreSQL, Angular, GWT

In-house platform of the lender: accounting, scoring, client websites and apps, CRM. 30 services on 40 virtual machines, running 24/7.

- Developed the platform, including the credit history module and the first version of the risk platform.
- Restored services during incidents and worked with business teams and vendors to find root causes.
- Onboarded and trained new developers and support engineers.
- **Built the support process: response time down 50%.**
- **Built the release and rollback process: 3 times fewer incidents, 20% less downtime.**
- **Automated routine support work, saving up to 50% of engineers' time on some tasks.**
- **Created the knowledge base: onboarding went from 4–5 days to 2.**

Skills

Languages	Java 6–25, Kotlin, SQL, TypeScript
Backend	Spring Boot, Spring Cloud, Hibernate/JPA, MapStruct, Micronaut, Ktor, REST, SOAP, OpenAPI
Processes and decisions	Camunda, Flowable, BPMN, custom decision engines
Data and messaging	PostgreSQL, MySQL, Oracle, RabbitMQ, Kafka, ActiveMQ, Hazelcast, Infinispan, Redis, MinIO, RustFS
Infrastructure	Kubernetes, RKE2/Rancher, Helm, Docker, Jib, GitLab CI, Nexus, Keycloak, Linux
Observability	Prometheus, Grafana, ELK, Vector, Promtail, Parseable, Trivy
Frontend and mobile	React, Vaadin, Flutter, Android (Kotlin)

Education

Moscow Witte University, Applied Informatics, specialist degree

// Languages

Russian native

English B2

Spanish B1
